

The CPS Chalkboard makes teaching more interactive.

Imagine you're going over a lesson with your class and suddenly discover they don't understand it. You'll have to go over the lesson again. Wouldn't it be great if you could interact with them while you do it, instead of being chained to the blackboard? With the CPS Chalkboard from eInstruction[®], you can. You'll be able to walk from desk to desk, checking your students' answers, while working out the correct solution using the handy Chalkboard tablet and stylus. Everything you write can be projected on your screen for the whole class to see.

In a sense, the Chalkboard allows you to be two places at once—in front of the class, explaining the lesson onscreen, while remaining accessible to individual students for one-on-one instruction.

Plug and play technology that enhances teaching.

The Chalkboard gives you the mobility you want, allowing you to get out of your chair so you can engage your students. The stylus features a built-in laser pointer to help students follow the lesson.

Now, you have an easier way to run CPS, add questions and graphics to tests, and demonstrate solutions onscreen from anywhere in the classroom. You can even use it as a wireless mouse to operate other programs you use, including Microsoft[®] PowerPoint[®], Microsoft[®] Word[®], and your Internet browser.

With the CPS Chalkboard you'll get:

- Freedom to teach from anywhere in the classroom
- Stylus with built-in laser pointer
- Wireless operation of Microsoft[®] Word[®], Microsoft[®] PowerPoint[®], and Internet browsers
- Receiver with three convenient USB ports
- Ergonomic design and high performance
- 30-foot range for unhindered movement
- 20-hour battery life
- One-year warranty

Use the CPS Chalkboard to create questions or demonstrate material.

Requirements for PC

Windows 2000
Windows Me
Windows XP
Pentium II
USB Port
CD-ROM Drive

Requirements for Mac

Mac OS X
G3 Processor
USB Port
CD-ROM Drive
